EXAMINER

NGUYEN, THANH T

ART UNIT PAPER NUMBER

2144

DATE MAILED: 08/02/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/800,115

Applicant(s)

AGRAWAL ET AL.

Examiner

Tammy T. Nguyen

Art Unit

2144

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE (3) MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 May 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-60 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-60 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 5/5/05.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

UNITED STATES PATENT AND TRADEMARK OFFICE

COMMISSIONER FOR PATENT  
UNITED STATES PATENT AND TRADEMARK OFFICE  
WASHINGTON, D.C. 20590  
www.uspto.gov

*Detailed Office Action*

1. This action is in response to the amendment filed on May 5, 2005.
2. Claims 1-60 are pending.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 19, and 37 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

5. In claims 1, 19, and 37 the applicants wrote "retrieving at least one **but not all** of the plurality of blocks". (emphasized added). The examiner cannot find any support for this limitation. The examiner considers the "but not all" as a negative limitation. According to MPEP2173.05(i) "Any negative limitation or exclusionary proviso must have basis in the original disclosure". Since the applicants does not positively describe

Art Unit: 2144

that retrieving at least one but not all, the examiner consider the limitation "but not all" as a new matter.

### *Claim Rejections - 35 USC § 103*

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 1-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over McLaughlin et al., (hereinafter McLaughlin) U.S. Patent No. 5,988,847, Nazem et al., (hereinafter Nazem) U.S. Patent No. 5,983,227, and Michel K. Bowman-Amuah

Art Unit: 2144

(hereinafter Bowman-Amuah) U.S. Patent No. 6,742,015 in view of Roberts S. Mason.,

(hereinafter Mason) U.S. Patent No. 5,884,098.

8. As to claim 1, McLaughlin teaches the invention as claimed, including a method of servicing a request for a document over a computer network, comprising the steps of: defined in the script of the requested document from a memory, the memory storing the at least one of the plurality of blocks defined in the script of the requested document (col.3, lines 40-49, and col.8, lines 5-20); and dynamically generating any block defined in the script of the requested document that is not stored in the memory and storing a copy of each dynamically generated ones of the plurality of blocks in the memory (col.3, lines 60-65, col.5, lines 24-36, and col.8, lines 5-20). But McLaughlin does not teach the document including a script that defines plurality of blocks. However, Nazem teaches the document including a script that defines plurality of blocks (Fig.5A, multiple blocks, Breaking news, world, and U.S. Stock news and report). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Nazem's teaching into the computer system of McLaughlin to have a document including a script that defines plurality of blocks because it would have provided a user template for a user making a request and eliminated the need to make requests from other servers for portion of the live data over the internet. McLaughlin and Nazem do not teach each block including a reference to a data source and code that is adapted to access the data source and to format the data accessed from the data source. However, Bowman-Amuah teaches each block including a reference to a data source and code that is adapted to access the data source and to format the data accessed from the

Art Unit: 2144

data source (col.47 lines 30-67, and col.52, lines 55-61). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Bowman-Amuah's teaching into the computer system of McLaughlin to have a each block including a reference to a data accessed from the data source because it would have provided less complex, faster interactions and made the systems more robust. Also, McLaughlin, Nazem and Bowman-Amuah do not teach retrieving at least one but no all of the plurality of blocks, and generating remaining blocks. However, Mason teaches retrieving at least one but no all of the plurality of blocks, and generating remaining blocks (see col.8, lines 1-28, and col.9, lines 1-30). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Mason's teaching into the computer system of McLaughlin to have retrieving at least one but no all of the plurality of blocks, and generating remaining blocks because it would have provided an advantage warranting the additional cost and complexity of the resulting system.

9. As to claim 2, McLaughlin teaches the invention as claimed, further comprising the step of assembling the requested document from at least one of the retrieved and dynamically generated blocks (col.5, lines 30-40).

10. As to claim 3, McLaughlin teaches the invention as claimed, further comprising the step of sending the assembled document over the computer network to an originator of the request (col.8, lines 20-34).

11. As to claim 4, McLaughlin teaches the invention as claimed, further comprising the step of sending at least one of the retrieved and dynamically generated blocks over the computer network to an originator of the request (col.8, lines 5-33).

12. As to claim 5, McLaughlin and Nazem do not teach the invention as claimed, wherein the document includes an XML document. However, Bowman-Amuah teaches the document includes an XML document (col.41, lines 24-49). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Bowman-Amuah's teaching into the computer system of McLaughlin to have the document includes an XML document because it would have allowed designers to create their own customized tags, enabling the definition, transmission, validation, and interpretation of data between applications and between organizations.

13. As to claim 6, McLaughlin and Nazem do not teach the invention as claimed, wherein the document includes an HTML document. However, Bowman-Amuah teaches the document includes an HTML document (col.41, lines 24-49). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Bowman-Amuah's teaching into the computer system of McLaughlin to have the document includes an HTML document because it would have created documents on the World Wide Web and allowed Web developers to direct users to other Web pages.

14. As to claim 7, McLaughlin does not teach the invention as claimed, wherein the request includes an HTTP request. However, Nazem teaches the request includes an HTTP request (col.3, lines 15-21). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Nazem's teaching into the computer system of McLaughlin to the request includes an HTTP request because it would have formatted and transmitted messages between web server and browser in the communications network.

Art Unit: 2144

15. As to claim 8, McLaughlin teaches the invention as claimed, wherein the memory is a cache memory (memory 215 in fig.2) (see col.7, lines 40-50).

16. As to claim 9, McLaughlin teaches the invention as claimed, wherein the memory is adapted to be shared among multiple processes (share multiple processes 231, 232, 233).

17. As to claim 10, McLaughlin teaches the invention as claimed, further including the step of determining whether the at least one of the plurality of stored blocks has been invalidated and carrying out the retrieving step only when the at least one of the plurality of stored blocks has not been invalidated (see col.7, lines 1-16).

18. As to claim 11, McLaughlin teaches the invention as claimed, further comprising the step of determining at least one of an invalidation mechanism and an expiration time for each dynamically generated block that is stored in the memory (See col.5, lines 25-37).

19. As to claim 12, McLaughlin teaches the invention as claimed, further comprising the step of storing a placeholder block configured to enable an external data source to asynchronously publish data thereto (See col.6, lines 35-49).

20. As to claim 13, McLaughlin teaches the invention as claimed, wherein the placeholder block is free of code to access and format data (See col.5, lines 25-60).

21. As to claim 14, McLaughlin teaches the invention as claimed, further comprising the step of accepting asynchronous input from an external data source, the asynchronous input updating at least one block stored in the memory (See col.6, lines 35-49).

22. As to claim 15, McLaughlin teaches the invention as claimed, wherein the

Art Unit: 2144

memory is maintained across a plurality of cache servers, and wherein a coherency mechanism maintains coherency of the memory across the plurality of cache servers (See col.7, lines 30-40).

23. As to claim 16, McLaughlin teaches the invention as claimed, wherein the plurality of cache servers are distributed over a geographical area (See col.5, lines 5-23).

24. As to claim 17, McLaughlin teaches the invention as claimed, further comprising the steps of associating at least one caching property to each dynamically generated block, the at least one caching property determining when the associated block is invalidated (See col.5, lines 22-55).

25. As to claim 18, McLaughlin teaches the invention as claimed, wherein the at least one caching property is stored along with the copy of each dynamically generated block stored in the memory (See col.5, lines 22-55).

26. Claim 19 has similar limitations as claim 1; therefore, it is rejected under the same rationale. As to the added limitation McLaughlin further teaches at least one processor (120 Fig.2) and at least one storage device (215 Fig.2) (See col.7, line 42 to col.8, line 34).

27. Claims 20-36 have similar limitations as claims 2-18; therefore, they are rejected under the same rationale.

28. Claims 37-54 have similar limitations as claims 1-18; therefore, they are rejected under the same rationale.

29. Claims 55, and 57-60 are rejected under 35 U.S.C. 103(a) as being

Art Unit: 2144

unpatentable over McLaughlin et al., (hereinafter McLaughlin) U.S. Patent No. 5,988,847  
in view of Nazem et al., (hereinafter Nazem) U.S. Patent No. 5,983,227

30. As to claim 55, McLaughlin teaches the invention as claimed, including a method of servicing a defining a caching property for each identified block, the caching property defining when each identified block is to be invalidated (See col.7, line 51 to col.8, line 31); caching the identified blocks in a memory (215 Fig.2, dynamic cache); maintaining each of the cached blocks in the memory according to the defined caching property defined for each block, and servicing the request for the Web page at least partially from the cached blocks in memory (See col.8, lines 5-35, and col.9, lines 6-52). But McLaughlin does not teach the document including a script that defines plurality of blocks. However, Nazem teaches the document including a script that defines plurality of blocks (Fig.5A, multiple blocks, Breaking news, world, and U.S. Stock news and report). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Nazem's teaching into the computer system of McLaughlin to have a document including a script that defines plurality of blocks because it would have provided a user template for a user making a request and eliminated the need to make requests from other servers for portion of the live data over the internet.

31. As to claim 57, Nazem further discloses assembling the requested Web page from at least one of the cached blocks and wherein the method further comprises a step of generating any block of the requested Web page not retrieved from the memory (Fig.5A, multiple blocks, Breaking news, world, and U.S. Stock news and report). It would have

Art Unit: 2144

been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Nazem's teaching into the computer system of McLaughlin to generate the request web page because it would have provided a user template for a user making a request and eliminated the need to make requests from other servers for portion of the live data over the internet.

32. As to claim 58, Mc Laughlin teaches the invention as claimed, further including a step of storing a copy of any generated block in the memory (215 fig.2) (See col.7, lines 40-62).

33. As to claim 59, Nazem further discloses the invention as claimed, further including the step of sending the assembled Web page over the computer network (Fig.5A, multiple blocks, Breaking news, world, and U.S. Stock news and report). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Nazem's teaching into the computer system of McLaughlin to generate the request web page because it would have provided a user template for a user making a request and eliminated the need to make requests from other servers for portion of the live data over the internet.

34. As to claim 60, McLaughlin teaches the invention as claimed, wherein the caching properties include at least one of a unique identifier, an expiration date, an expiration time and an invalidation rule (See col.5, lines 22-55).

35. Claim 56 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Art Unit: 2144

McLaughlin et al., (hereinafter McLaughlin) U.S. Patent No. 5,988,847 and Nazem et al., (hereinafter Nazem) U.S. Patent No. 5,983,227 in view of Michel K. Bowman-Amuah (hereinafter Bowman-Amuah) U.S. Patent No. 6,742,015.

36. As to claim 56, McLaughlin does not teach the invention as claimed, wherein each of the constituent blocks includes a reference to a data source and code that is adapted to access the data source and to format the data accessed from the data source. However, Bowman-Amuah teaches each block including a reference to a data source and code that is adapted to access the data source and to format the data accessed from the data source (col.47 lines 30-67, and col.52, lines 55-61). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to implement the Bowman-Amuah's teaching into the computer system of McLaughlin to have a each block including a reference to a data accessed from the data source because it would have provided less complex, faster interactions and made the systems more robust.

### *Conclusion*

37. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2144

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

38. Any inquiries concerning this communication or earlier communications from the examiner should be directed to **Tammy T. Nguyen** who may be reached via telephone at **(571) 272-3929**. The examiner can normally be reached Monday through Friday between 8:00 a.m. and 5:00 p.m. eastern standard time.

If you need to send the Examiner, a facsimile transmission regarding this instant application, please send it to **(703) 872-9306**. If attempts to reach the examiner by telephone are unsuccessful, the Examiner's Supervisor, David Wiley, may be reached at **(571) 272-3923**.
